

MOMA Toilet and Shower Partitioning

MOMA toilet and Shower partitioning system uses Multipurpose Compact Laminate. Compact laminate is a low maintenance, high impact resistant material and is ideal for wet area applications as they are water resistant and not adversely affected by moisture. Compact laminates are very hygienic due to the fact that they have a closed structure and require no edging and therefore eliminating the opportunity for bacteria to survive.

Graffiti is easy to clean off using an organic solvent without affecting the colour of the compact.

With a wide range of colours, the panels are supplied cut to size and pre-drilled along with all hardware and components needed for installation. The system is flat-packed for delivery anywhere in Australia and Overseas.

Panels

Divisional, frontal and nib panels come finished to size, ready for assembly.

Doors

Pre-drilled with concealed gravity hinges, indicator bolt, bumper and rubber tipped coat hook.
Polished edge standard on Multipurpose and Innovations Partitioning.

Headrails

Anodised aluminium available in three profiles:

- Streamline (round),
- Hexline (hexagonal) and
- Slimline (new release product)

Foot Assemblies
