

Lamitech Leather Laminate

Lamitech Leather Laminates are different from traditional laminates. Its decorative surface is made from a leather-like material, therefore, when touched, it has the tactile and warm feel of a natural material.

The advantage of this material is that it can be processed like a traditional HPL (i.e. pressed onto board) which allows it to be used in a large variety of applications. It can even be used as a horizontal surface, provided that it is not subject to extreme stress.

Lamitech Leather Laminates are easy to maintain. It can be cleaned with a mild detergent or a damp cloth. As with all natural leather materials, solvents and aggressive products should not be used for cleaning.

MOMA has in stock a limited range of colours (refer to colour chart on next page). Please contact MOMA if you would like to specify a colour or if you are interested in a particular colour to check its current availability.
